Take a new photo

Select an existing photo

Add filters

Tools page

3up sample view

3up sample view version 2

Collage
Button

Filter
Button

Tools
Button

Users can upload up to 3 photos into
the collage set at once. The reason to
have two versions of 3up template
listed is to speed up the rotating process.
Users can tap on either one of them
to achieve the desired layouts

Flow starts from
the camera view.
User can choose to
either select an existing
photo or to take a
new picture.

These two pages show that
users can apply filters, adjust contrast etc.
They can do these by toggling between
Filter and Tools button.

Once users tap the "collage" button,
it will take them to the page on the right.
The photo they selected will be defaulted
to the top of the 2up collage set.

Drag the handle to adjust
collage window sizes.

Tap on the template button
would rotate the window layout

Swap picture potisions
by tap-hold-drag

Users cannot proceed until
the collage is full

Users can always tap
the "x" to delete/replace
the photo.

For the 2nd/3rd photo in the collage,
users can choose to either take a new photo
or select another existing photo. As the
two pictures shown on the right.

Edit

Once the 2nd/3rd photo is selected,
users can edit this photo.

Once collage is full, users can finish and
publish their collages.
If they are unhappy with the result, they can
either choose to go back, or to change templates,
or to replace any of the photos utill they are happy
with their designs.

Users can fill out information like
the captions, locations etc. and select
the social networks they want to also
publish to. Then head over to tap on
"SHARE" to get their collage published.

Now the collage is published.
Users can still choose to delete this
post if they want to. They can tap on the "..."
button and select "delete" from the drop down.
Or they can take another photo or make another
collage starting from the "take a photo" button.

UX Magazine

how to read a wireframe

Whether a client, stakeholder, or new to the wireframe world, here's a quick rundown of how to make sense of it all.

Image

Video

1 Notes...
2 Notes...
3 Notes...

1 Visual vocabulary
Familiarize yourself with certain wireframe standards such as those for images, video, and drawing attention to certain areas.

2 Logos & Branding
Logos will usually be represented the same way as images, a box with a "X" through it, and a text description inside. Grayscale or low fidelity logos may be placed in the wireframe for certain situations.

Color 3
Other than links possibly being colored differently, most color and visual design elements are left for the later visual design stage.

Logo   Services   Work   Clients   About   Products

We make user experiences better.

We listen to you, we listen to your customers, and then we put our experience to work; creating attractive, interactive user experiences that get results.

Screenshot

UX Design Research

Short description of the client, what they do, and what they are all about. Also, a brief explanation of the main issue at hand for the client, that we addressed with our work.

Short description talking about how we were created in to take a look at what was going on, and asked to try and figure out why.

View the case study

4 Hierarchy
The importance or hierarchy of the information on the page is created by using headings, most often bold or heavier weighted text, of different sizes and location.

5 Links
Links are represented most often as blue, underlined text. Links may also be a different color, keeping in line with a particular visual design direction.

Layout 7
All of the elements listed above, keeping in mind whitepace, readbility, and hierarchy, collectively make up the overall page layout.

Text 6
Text in the wireframe will either be represented by actual copy, or by placeholder text such as Lorem ipsum, sometimes referred to as "greeking".
